SUMMARY

Full-Stack AI/ML Engineer with a year of production experience building and deploying LLM-powered systems. RAG pipelines, route optimization and full-stack products from architecture to deployment. Computer Engineering graduate, GPA 9.28/10, AI/ML minor. Open to ML Engineer, AI Engineer and Full-Stack AI roles.

EXPERIENCE

Software Developer · **EduvanceAI** Aug 2025 - Present | Mumbai

- Built Sales Copilot for a 50-agent field team: TSP route optimization, LLM dealer-scoring, relational DB schema design and end-to-end features (OCR catalogue scanning → RAG talking points, geo-tagging, Next Best Action recommendations) and cutting visit planning from ~2 hrs/week to under 25 min/agent and recovering ~4,000 agent-hours annually.
- Built and deployed 10+ LLM-powered modules on new.eduvance.ai across HR, Sales, and Finance verticals; managed AWS Lambda/ECR deployments and migrated GenAI secrets to AWS Secrets Manager
- Designed and deployed an LLM-based exit survey analytics pipeline, classifying 2,000+ employee responses across 8 attrition-related categories with sentiment and supporting rationale via structured output schemas; used async batch processing for scalable inference and delivered segmented insights across age, gender, tenure and region
- Solo-built and own a bilingual (Hindi/English) video and document RAG system for enterprise vehicle maintenance training content: implemented Whisper-based transcription, semantic chunking with LLM-based chunk selection, hybrid document/video retrieval and native Hindi vector search with colloquial term normalization
- Designed and wrote scenario-specific prompts across 4 languages (Hindi, Marathi, Gujarati, Tamil) for a judge/feedback-based LMS training chatbot; built an LLM-based description generator that auto-creates chatbot summaries from uploaded scenario data

PROJECTS

Little Angel Foundation - Full-Stack Platform · **React · Node.js · PostgreSQL · NeonDB · Express.js** 2026

- Built and deployed a full-stack NGO platform with public donation, volunteer and CSR forms feeding a custom admin dashboard for verification and tracking; added PDF receipt generation and a newsletter broadcast tool.

OrgMind - Hybrid GraphRAG System · Neo4j · Pinecone · GPT-4o-mini · LangChain · RAGAs · Python 2026

- Designed a hybrid GraphRAG system with a 4-stage inference pipeline : query decomposition → graph traversal → vector retrieval → context fusion, routing each query to the right retrieval method

Safe Yatra - On-Device ML Safety App · TensorFlow.js · React Native · Geolocation API 2024 – 2025

- Trained and deployed a TensorFlow.js voice emotion classifier (70% distress-detection accuracy) fully on-device for offline SOS detection; analyzed failure modes across 150 test audio samples, identifying background noise as the leading cause of misclassification and improving accuracy by 8 points via targeted data augmentation.

LeetPush - Developer Productivity Extension · JavaScript · GitHub API · Chrome Extensions API 2026

- Built a Chrome Extension intercepting window.fetch to auto-sync accepted LeetCode solutions to GitHub across 15 languages; auto-generates categorized READMEs and tracks submission streaks, zero third-party service dependency.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript

AI / ML: LangChain, LangGraph, RAG, GraphRAG, OCR, TensorFlow, Scikit-learn, Hugging Face, RAGAs, Prompt Engineering, NLP

Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Tableau

Backend & Infra: Python (FastAPI), REST APIs, Docker, AWS, GitHub Actions, NodeJS

Frontend: React, Vite, Tailwind CSS

Databases: PostgreSQL, Neo4j, Pinecone, FAISS, Supabase

Core CS: DSA (300+ LeetCode), System Design, OOP, Operating Systems

EDUCATION

B.E. Computer Engineering · SIES Graduate School of Technology, Nerul 2021 – 2025

Minor: Artificial Intelligence & Machine Learning GPA: 9.28 / 10
